KI USAGE PRINCIPLES · DIGITAL SOVEREIGNTY

Our Rules for Using AI

AI makes our developers significantly faster – but only under clear conditions. Five rules we have set for ourselves: concise, verifiable and binding.

01

Local operation by default

All AI models in your project run in our fully redundant data center in Dortmund or on premises at your site. Nothing is sent to an external AI service without your explicit consent.

02

Frontier models only at your request

We use models from OpenAI, Anthropic or Mistral only if you explicitly request it – agreed per project, covered by a data processing agreement and with no training on your data.

03

Your code is never training data

We do not train models on client projects, and nothing from your project flows into other projects – neither at ingenit nor at third parties. No external provider makes us dependent.

04

04 With AI, not just by AI

AI agents deliver first drafts, tests and documentation; our people direct them and write code themselves. Every line goes through code review, static analysis, automated testing and sign-off by qualified computer scientists.

05

Transparency – or no AI at all

On request, we document the model, where it runs, what it is used for and how its output is reviewed – or we use no AI in your project at all. The choice is yours.

Your code stays your code.

Our own data center in Dortmund – operating since 2004, expanded in 2012 and 2022, fully redundant, located in Germany and governed by German law.
